

Do you take Modafinil or Armodafinil?

Did you know that Modafinil & Armodafinil can reduce the effectiveness of hormonal contraceptives?

A specific enzyme in the liver breaks down Modafinil/Armodafinil, then eliminates it via your urine. That same enzyme which is responsible for clearing the body of Modafinil/Armodafinil also breaks down contraceptives. Studies have shown that when contraceptives and Modafinil/Armodafinil are taken together, the level of contraceptives in your blood decreases by 18 percent, resulting in lower effectiveness of contraceptives.

It is recommended that you use an additional method of contraception while you are taking Modafinil/Armodafinil, and for one additional month after discontinuing these medications.

For more information go to the 'Modafinil/Armodafinil - Birth Control and Pregnancy' post on our website or scan here:

Always read the Product Information leaflet supplied with your medication. Speak to your Doctor about any concerns you have with your medications.
